Managed Database Server Requirements

Brother-Panther for DB2 LUW managed database server has the following requirements.

Resource	Requirement
Memory	2 GB of RAM recommended, 1 GB minimum
Available Disk Space	10 GB recommended, 1 GB minimum *Note: Additional disk space may be required depending on the amount of transactions and whether statement collection is turned on. The default maximum that the collector will use is up to 18GB. This maximum can be configured by setting the event monitor parameters in the dbievm.cfg file. Please consult the Install Guide for more information on these parameters.*
Database	☐ IBM DB2 AESE, ESE, Workgroup, Express, or Express-C for LUW v9.5, v9.7, v10, or v10.5 *Note 1: The Brother-Panther DBI Repository must be installed on a version of DB2 that is equal to or greater than the latest version of DB2 databases to be monitored.* *Note 2: The minimum value for MON_HEAP_SZ is 1024 for any monitored instance. Larger sizes might be required if there are a larger number of objects or very high statement activity rates. The collector sets the DB2 registry variable DB2_EVMON_STMT_FILTER. This reduces the resource consumption of statement collection on the monitored database. This variable is automatically set by the collector and should not be manually changed by the user.*
