Table of contents

• Surrogate key	4-5
• Natural key	6-7
• OLD STRUCTURE	8-10
• NEW STRUCTURE	12-13

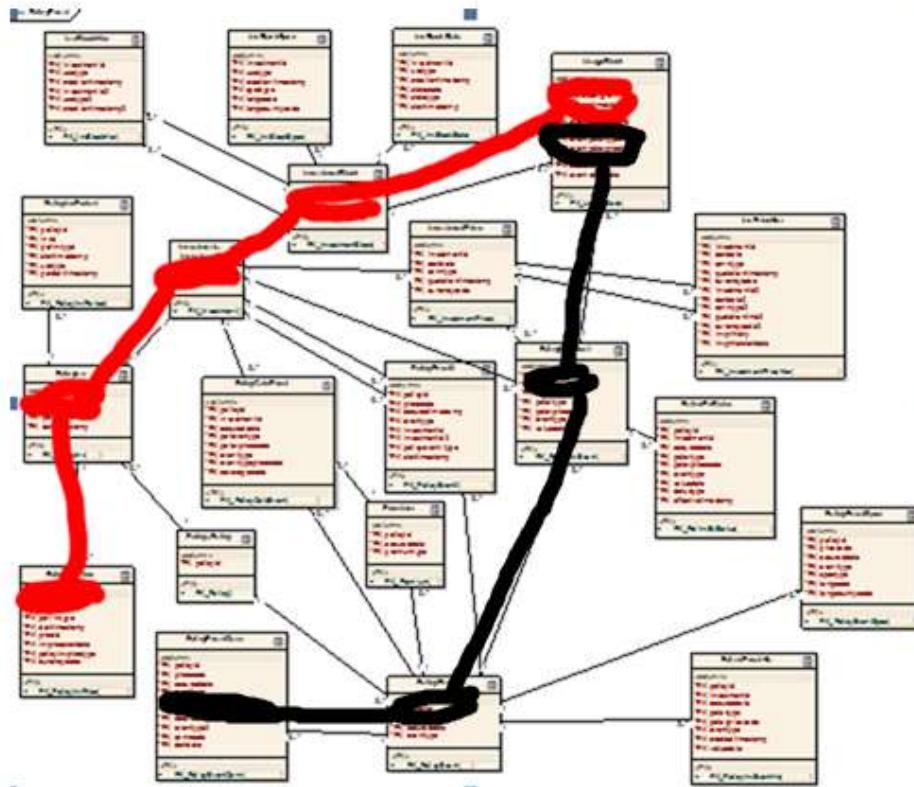

Surrogate key

- The surrogate is internally generated by the system and is invisible to the user or application.
- I'm not the biggest fan of surrogate keys, also I easily get a headache when developers explain that ORM framework and surrogate is fantastic..."it's so easy and fast to implement".

Surrogate key

Painful joins

Touches several tables

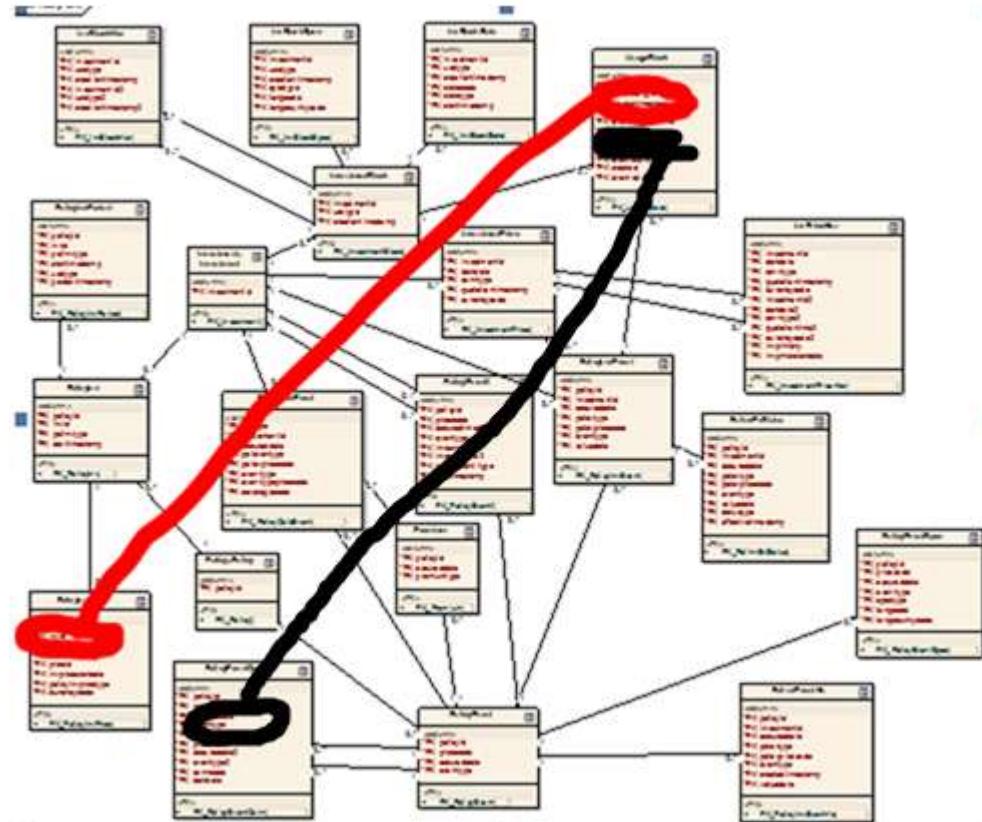

Natural key

- Is formed of attributes that already exist
- Can avoid duplicates
- Fast access to tables
- Supports well batch processing and reporting
- I'm a natural key fan....

Natural key

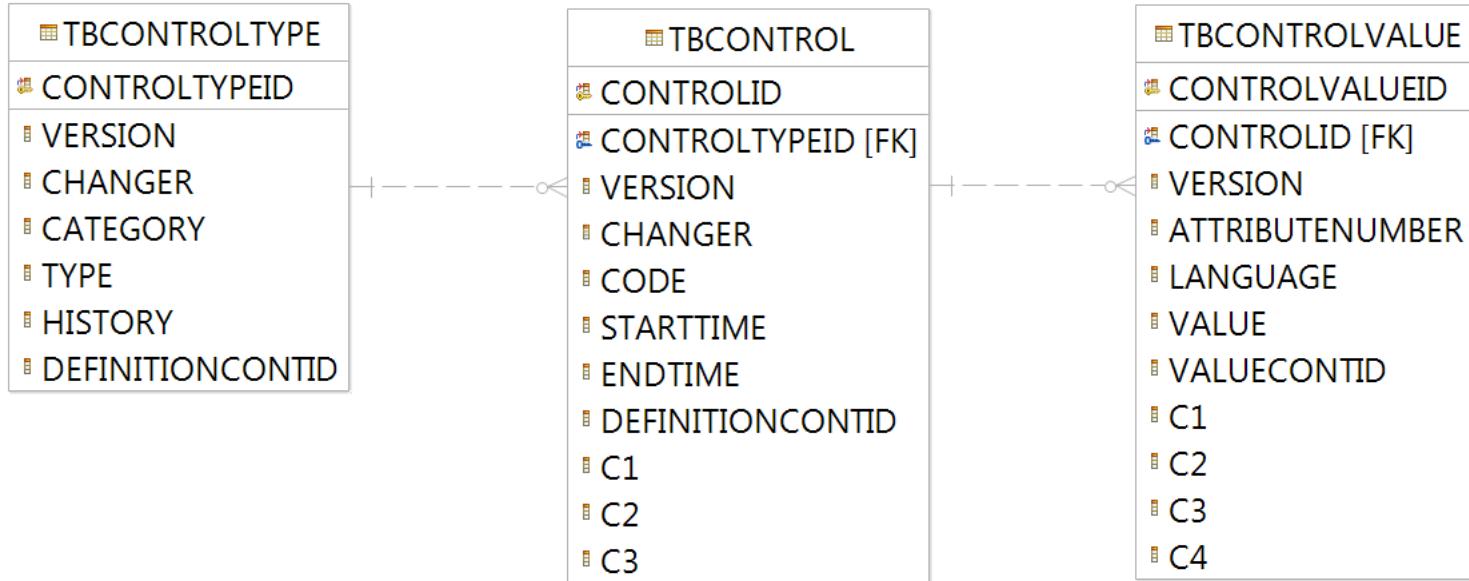

Effective queries

Batch processing!

Reporting!

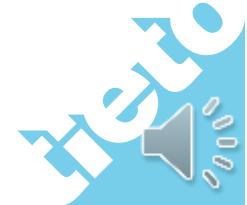

OLD STRUCTURE

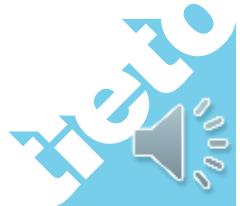

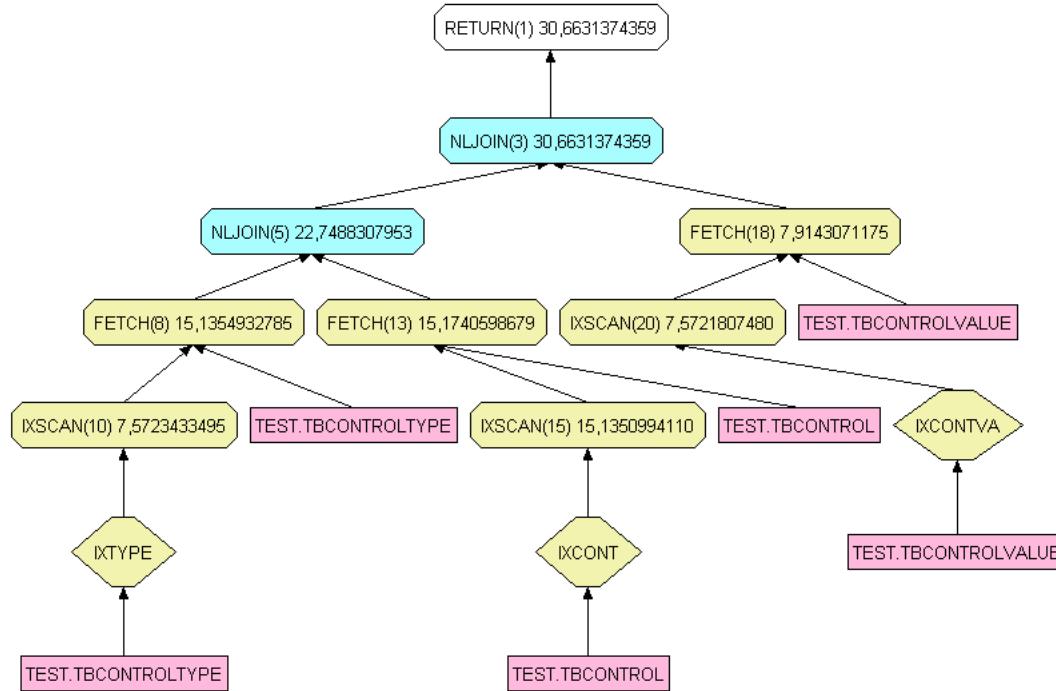

```

select value.value from test.tbcontroltype type
join test.TBCONTROL cont on cont.controltypeid = type.controltypeid and
cont.code = '404'
join test.TBCONTROLVALUE value on cont.controlid = value.controlid
and ATTRIBUTENUMBER = 5
where type.TYPE = 'ACTIVITY_CODE';

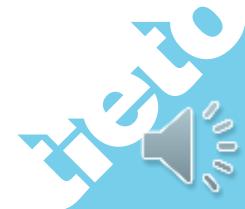

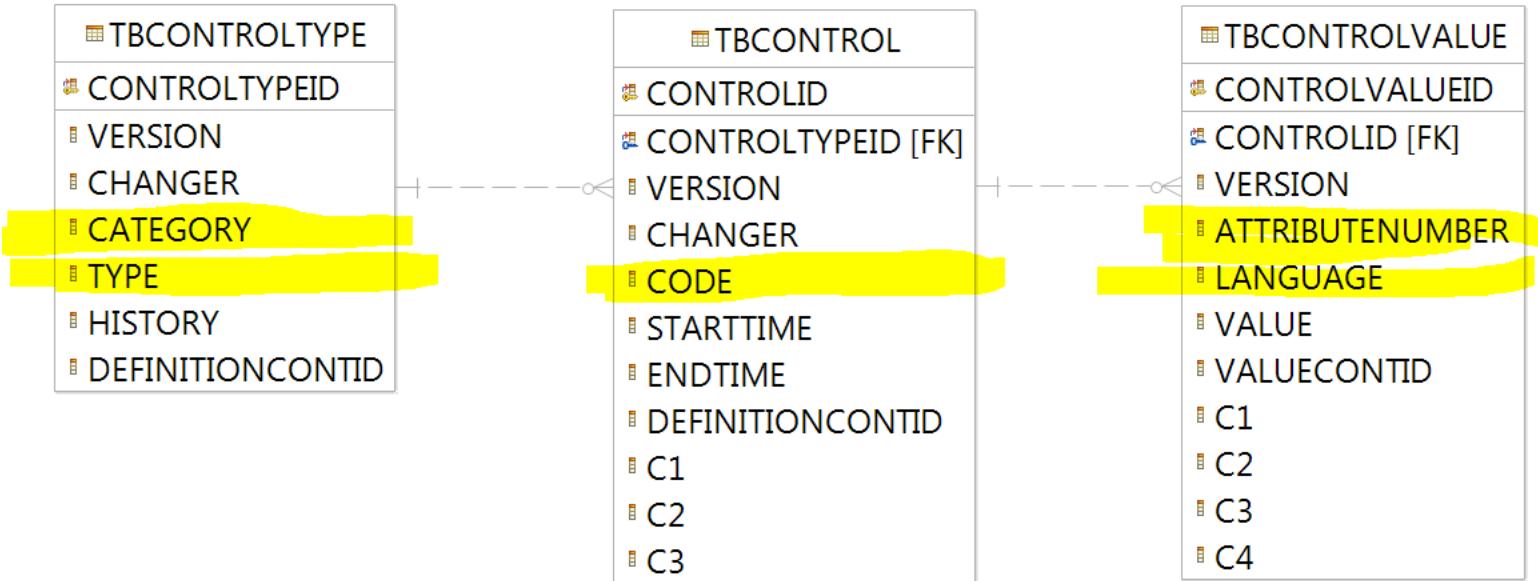

```

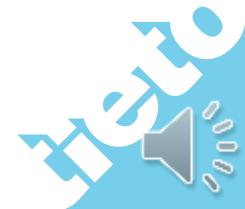

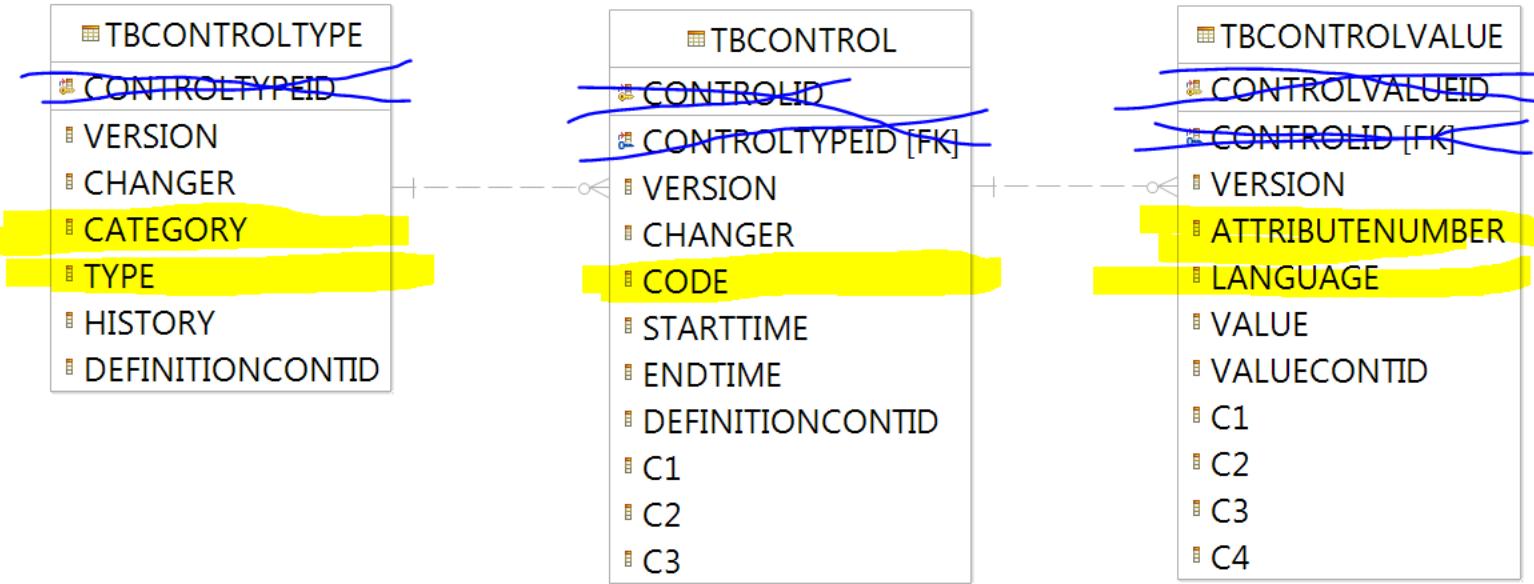

OLD STRUCTURE

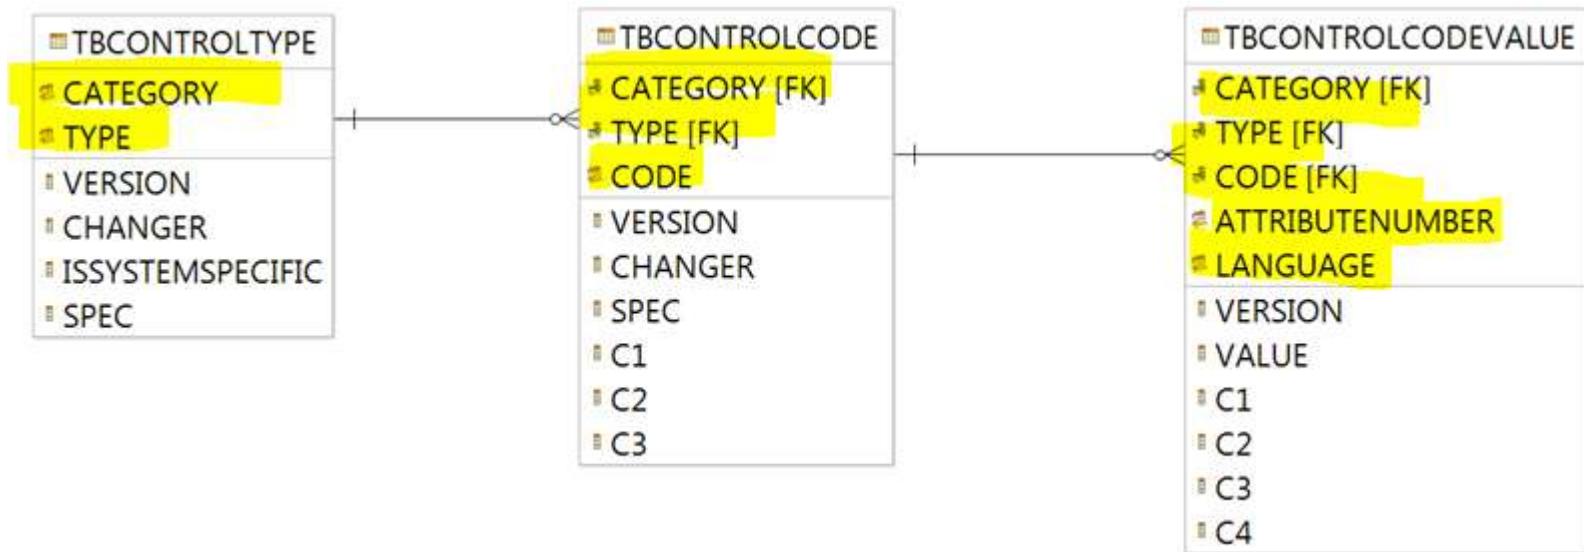

How to change PK structure

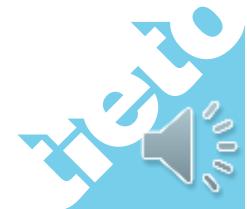

How to change PK structure

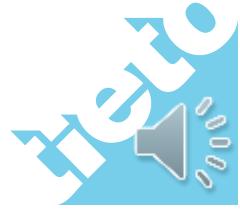

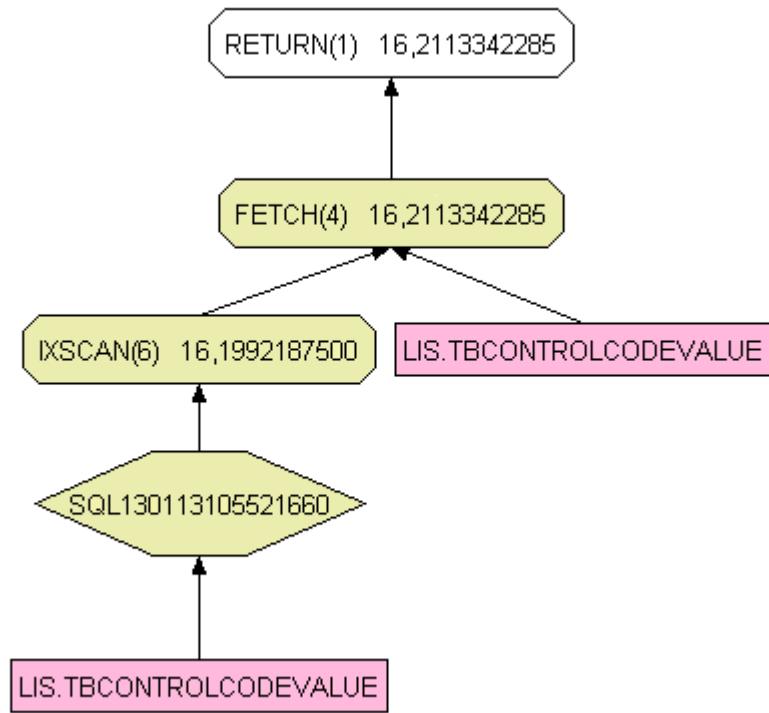

New PK structure

```
select value from lis.tbcontrolcodevalue  
where TYPE = 'ACTIVITY_CODE'  
and code = '404'  
and ATTRIBUTENUMBER = 5
```

New PK structure

**Knowledge.
Passion.
Results.**
